

### **blue whales pdf**

The blue whale (*Balaenoptera musculus*) is a marine mammal belonging to the baleen whale parvorder, Mysticeti. At up to 29.9 metres (98 ft) in length and with a maximum recorded weight of 173 tonnes (190 short tons), it is the largest animal known to have ever existed. Long and slender, the blue whale's body can be various shades of bluish-grey dorsally and somewhat lighter underneath.

The Centre for Whale Research is part of a consortium of Institutions and individuals, whom are studying blue whales along the Western Australian coastline.

### **Blue Whales - Centre for Whale Research**

Healthy marine species like whales, sea turtles, coral, and salmon are important for maintaining balanced and thriving ocean ecosystems. We work to prevent marine species populations from decline and extinction, protect them from human activities, and monitor activities that might impact them so they are around for future generations.

The blue whale (*Balaenoptera musculus*) is the largest animal to have ever lived, being almost as big as a Boeing 737 and even larger than the biggest dinosaurs. The largest recorded length for a blue whale is 33.5 metres, although most individuals vary between 24 and 27 metres. The heart of this monstrous whale is actually around the size of a Volkswagen Beetle.

Killer whales, or Orcas (*Orcinus orca*) are cetaceans. They are the largest dolphins in the world, called 'whales' because of their size. Orcas have mostly black skin with white patches. They are found in all the world's oceans, from the cold of the Arctic to the tropical seas. They are easy to identify because of their distinctive white and black colouring. They live in pod
