Cell and Molecular Biology. The life of a cell depends upon thousands of chemical reactions and interactions coordinated with genetic instruction of cells and its environment. The molecules which form the basis of life provide scientists with a more atomistic and predictable tool for study. Working with whole cell or organism can be unpredictable,...

Preface. Cell and molecular biology is an experimental science and, like most instructors, I believe students should gain some knowledge of how we know what we know. With this in mind, I decided to approach the experimental nature of the subject in two ways. As I wrote each chapter, I included enough experimental evidence to justify many...

Cells â€œ Fundamental working units of every living system. â€œ Every organism is composed of one of two radically different types of cells: â€œ prokaryotic cells â€œ eukaryotic cells which have DNA inside a nucleus. â€œ Prokaryotes and Eukaryotes are descended from primitive cells and the results of 3.5 billion years of evolution.
