Once symbolic algebra was developed in the 1500s, mathematics flourished in the 1600s. Coordinates, analytic geometry, and calculus with derivatives, integrals, and series were developed in that century. Algebra became more general and more abstract in the 1800s as more algebraic structures were invented.

Algebra of Fields By definition, the elements of a field satisfy exactly the same algebraic axioms as the real numbers. As a result, everything you know about algebra for real numbers translates directly to algebra for the elements of any field. This includes virtually everything you know about elementary algebra, as well as basic linear algebra.
