A wide variety of foods can cause allergic reactions, but 90% of allergic responses to foods are caused by cow's milk, soy, eggs, wheat, peanuts, tree nuts, fish, and shellfish. Other food allergies, affecting less than 1 person per 10,000 population, may be considered "rare". The use of hydrolysed milk baby formula versus standard milk baby formula does not appear to change the risk.

Food allergies are immunologically mediated adverse reactions to foods. Any food protein can trigger an allergic response, and allergic reactions to a large number of foods have been documented; however, only a small group of foods account for most of these reactions.

Food Allergies: Practice Essentials, Background

Acute otitis media (middle ear infection) is extremely common in children and also occurs in adults. In acute otitis media, infection occurs behind the tympanic membrane (eardrum). Acute otitis media is usually caused by bacteria. In some individuals, ear infections may occur again and again.
