A T-beam (or tee beam), used in construction, is a load-bearing structure of reinforced concrete, wood or metal, with a t-shaped cross section. The top of the t-shaped cross section serves as a flange or compression member in resisting compressive stresses. The web (vertical section) of the beam below the compression flange serves to resist shear stress and to provide greater separation for the ...

The purpose of this study is to experimentally correlate the compressive strength (f_c) of concrete to the modulus of rupture (f_r) for plain concrete beams with a vertical construction joint placed at their center. The ACI code provides a formula for the correlation of f_r to f_c , but with the provision that the concrete specimen is monolithic (no joints).
