The International Journal of Periodontics and Restorative

Guided bone regeneration or GBR, and guided tissue regeneration or GTR are dental surgical procedures that use barrier membranes to direct the growth of new bone and gingival tissue at sites with insufficient volumes or dimensions of bone or gingiva for proper function, esthetics or prosthetic restoration.. GBR is similar to guided tissue regeneration (GTR) but is focused on development of ...

Guided bone and tissue regeneration - Wikipedia

The alveolar ridge splitting technique enables reconstruction of atrophied alveolar ridges prior implantation. However, in cases of severe atrophy, there is an unpredictable risk of fracturing the buccal lamella during the expansion. Currently, there is no preoperative assessment to predict the maximum distraction of the lamella. The aim of this study was to develop a biomechanical model to ...

Orally/Sublingually: The current estrogen of choice is 17 β -estradiol (brand name Estrace). It comes as a pill which can be either swallowed or dissolved under the tongue. Common wisdom says under the tongue (sublingual) may be safer for the liver, but there hasn't been research published on that yet.
